TITLE: Ferritic pearlitic steels for pressure tubes operating at high temperatures

SOURCE: Strojirenstvi, v. 15, no. 1, 1965, 36-42

TOPIC TAGS: ferritic steel, pearlitic steel, metal property, solid mechanical property, high temperature metal, heat resistant steel

ABSTRACT: Tables are presented comparing the most important characteristics of 39 brands of Czechoslovak and foreign ferritic-pearlitic steels, particularly their mechanical properties and creep strength at high temperatures. The tables are intended to aid designers in the selection of suitable steels for boilers, turbines, chemical installations and other high-temperature applications. This work was presented by Engr. J. Vodsed'alek, Candidate of sciences. Orig. art. has: 1 figure and 11 tables. [JPRS]

TITLE: Ferrite-pearlite steels for heavy forgings

SOURCE: Strojirenstvi, v. 15, no. 2, 1965, 127-130

TOPIC TAGS: ferritic steel, pearlitic steel, metal property, solid mechanical property

ABSTRACT: This is the second article of a series dealing with the properties of various sorts of steel used in engineering industries. Specifications are presented in the form of tables which include chemical composition, maximum operating temperatures, mechanical properties, creep strength, physical and electrical properties and recommendations for heat treatment. All the types discussed are classified into groups on the basis of the alloys used. Several foreign types are included for comparison. This work was presented by Engr. J. Vodsek'alek, Candidate of Sciences. Orig. art. has: 7 tables. [JPRS]

TITLE: Heat-resisting 12% chromium steels employed for power generating sets

SOURCE: Strojirenstvi, v. 16, no. 2, 1966, 103-112

TOPIC TERMS: electric generator, chromium steel, heat resistant steel, power  
generating station, mechanical property, metal physical property, austenitic steel

ABSTRACT: The article presents a series of tables specifying all the mechanical and physical properties of 12% heat-resisting chromium steels used at plants manufacturing generating sets for power stations. These steels have recently been improved by adding additional elements which extend the range of their application to 600°C. They can replace more expensive austenitic steels. This paper was presented by Engineer, Candidate of Sciences J. Vodsedalek. Orig. art. has: 10 tables. [Based on authors' Eng. abst.] [JPRS]

Treatment of rats with oestrogen gave rise to an increase of the number of these  
cells. Histochemical examinations showed that they should be regarded as a de-  
generated form of normal endometrial cells. It is contended that the number of  
clear cells is an indicator of the degree of hyperoestrogenism.

A 26-year-old woman with chronic myelogenous leukaemia gave birth in the 7th year of her disease to a healthy infant of 2100 g. Examinations of the placenta showed various myeloid cells with a predominance of myelocytes in the intervillous spaces. Post partum a rapid deterioration was observed in the mother's state and 2 weeks after birth she died. The infant is healthy without any sign of blood disorder.

1358. **Masculinizing hilus cell tumour of the ovary** Virilization okozó petefészek hilussejtdaganat. (Musculinisations syndromával társult méh-hypertrophia). JAKONOVITS A. Szegedi Orvostud. Egyet. Szülészeti és Nőgyógyászati Klin. Kozl., Szeged Orv. Hetil. 1958, 99/5 (172-175) Illus. 4

In a woman of 73 yr. who had shown signs of virilization for decades, hysterectomy was performed with simultaneous removal of the adnexa because of uterine haemorrhages and enlargement of the uterus. As cause of the virilization a hilus cell tumour of the ovary was found. The simultaneous occurrence of uterine hypertrophy and virilization has been described in the literature only once before. In this case of hilus cell tumour it was possible to demonstrate the female sex chromatin in half of the parenchyma cells. The only correct therapy of hilus cell tumours is operative removal; after operation the symptoms disappear and complete recovery may take place.

2167. VIRILIZATION IN A CASE OF OVARIAN HILUS CELL TUMOUR. (HYPER-TROPHY OF THE UTERUS AND MASCULINIZATION SYNDROME) - Virilisation bei Ovarhiluszellengeschwulst. (Gebärmutterhypertrophie und Masculinisationssyndrom) - Jakobovits A. Frauenklin., Med. Univ., Szeged - GYNAECOLOGIA (Basel) 1958, 146/6 (440-452) illus. 6

A 73-year-old patient showed symptoms of masculinization for some 20 yr. (facial hair growth, alopecia, enlargement of the clitoris). The serum K, Na and Ca levels, the blood sugar curves and the excretion of 17-ketosteroids were approximately normal. At the age of 66 curettage was performed on account of bleeding and myomatous uterus; no mucosa was obtained. Subsequently X-ray sterilization was performed. At the age of 73, supravaginal hysterectomy with removal of the adnexa was performed on account of bleeding (histological findings: atrophic mucosa). The right ovary showed a hilus cell tumour of approximately 1.5 x 2 cm. of typical structure with Reinke's crystalloids. Approximately 50% of the tumour cells showed sex chromatin in the nucleus.

„Apitery przeciwko gnieceniu się skamienia ze zżeranych włośni i celulozowych”. Przemysł Włókniarski. No. 9-10, 1959, pp. 218-231.  
5 tabs.

The authors have compiled a formula for urea-formaldehyde condensate intended for use as a non-condensate impregnating medium for apertic cellulose fibre fabrics. The impregnating bath used for this purpose contains, in addition to the condensate, a softening medium — triphenol IW — and crystalline sodium acetate. Ammonium phosphate and formic acid are used as catalyst. Saturation of the fabrics is carried out in padding machines at a temperature of the impregnating bath of 35°C. The fabric is, after squeezing, dried in a temperature of roughly 70°C. The fabric is, after squeezing, dried in a temperature of roughly 70°C. Further treatment consists in raising the temperature of the fabric, in a superheating apparatus, for from 3/4 to 5 minutes, to approx. 145°C. Any non-condensed resin and acid catalyst still remaining in the fabric is removed by washing with soap and soda.

✓ A new color reaction of steroids. (Yvan, Jakovljevic, Vojnosanit. Pregled (Yugoslavia) 11, 628: 1958) (English summary).—To 1 ml. of  $\text{Ac}_2\text{O}$  in a test tube 20 drops of phosphotungstic acid in  $\text{EtOAc}$  and approx. 1 mg. of test substance are added. This produces varying colors with various steroids. Estrone gives violet color, methyl-androsterone blue-green, androsterone dark-green, etc. The intensity of color is dependent on the concn. of steroid.
